## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, a plurality of MOSFETs disposed in comb-like shape on the semiconductor shape on the semiconductor substrate form an amplifier stage must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

FIG. 9 is a PRIOR ART drawing and can not show any feature in the applicant's claims.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Specification*

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Examiner's Amendment*

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 14 and 15, previously withdrawn from consideration for being drawn towards a non-elected invention, have been cancelled.

***Allowable Subject Matter***

4. Claims 1 thru 4, 6 thru 11, 13, and 18 thru 20 are allowed.
5. The following is an examiner's statement of reasons for allowance: The references of record, either singularly or in combination, do not teach or suggest at least a semiconductor device comprising a MOSFET, a signal input pad connected to a gate of the MOSFET, a high concentration impurity diffused region located beneath the signal input pad; an interconnection connected to the high concentration impurity diffused region, said interconnection being electrically isolated from said signal input pad; and a low resistance layer directly under the signal input pad, wherein the high concentration impurity diffused region is a substrate/well potential take-out region (claims 1-4, 6, and 18).

Regarding claims 7-11, 13, 19 and 20, the references of record, either singularly or in combination, do not teach or suggest at least a semiconductor device comprising a MOSFET, a signal input pad connected to a gate of the MOSFET, a high concentration impurity diffused region located below the signal input pad; an interconnection connected to the high concentration impurity diffused region, said interconnection being electrically isolated from said signal input pad; a polysilicon layer provided beneath said signal input pad, and a low resistance layer directly under the signal input pad, wherein the high concentration impurity diffused region is a substrate/well potential take-out region.

Art Unit: 2815

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
